

## A FEW RECENT PROJECTS AT THE SCHOOL

Kids get sick...they need medical attention. Even in Tanzania, that can be difficult AND costly...especially when we must take them for outside care. LOJA needs a place where students can receive care, and somewhere they can stay when they need to be separated from other students. We asked Jeanne, a nurse and a member of one of the summer teams, if she would be willing to help plan a dispensary and sick room. She had no idea what she was saying, "yes" to...and neither did we! But the results are amazing!

**#1 -- Jeanne getting her first look at the space she's going to transform into a 'sick room and medical room'...probably wondering to herself, "what have I gotten myself into?"**

**#2 -- But walls came down... windows went up...**

**Work continues, but soon the new dispensary will be completed!**

**Mtebe orienting a newly arrived work team**

## LABS, LIBRARY AND CHAPEL

**New Secondary School laboratories and library walls going up**

**Labs (in the foreground), and Library (in the Background), are nearing completion**

**Inside lab building, getting ready for lab tables, sinks, plumbing, etc.**

**Site for the school chapel. Construction will begin very soon. This will become the central gathering space on campus**
